

This presentation provides an introduction to “Trados Team”, a cloud-based platform for managing and sharing translation projects. Terminology management is one of the features of this platform.

At SHAPE Linguistic Services, we began using Trados Team on the unclassified network to overcome certain limitations (e.g. performance problems) of traditional computer-assisted translation (CAT) software such as Trados Studio. These limitations are all the greater in a small team like ours, without dedicated IT support.

The presentation highlights the key benefits and the main features of Trados Team. Such a cloud-based platform is of course only suitable for translating unclassified documents.
